

Lignum Pavilion

Design Agency: Frei + Saarinen Architects **Project Location:** Various
Designer: Barbara Frei, Martin Saarinen & Stefan Wülser **Photographer:** Hannes Henz

Lignum is the Swiss information centre concerning the use of wood. Frei + Saarinen Architekten were asked to design an exhibition pavilion that shows a contemporary use of wood for architectural purposes. The Lignum Pavilion is a walkable pile

of 20 layers, consisting of 50mm-thick planes and vertical elements of 130mm in height. Similar to a pixelated image, these 20 layers form an architectural body that leads the visitors through an architectural promenade in the shape of a spatial

'figure eight'. All 541 wooden pieces are cut by a cnc mill. The pavilion will be used ten times during a period of three years.
